Sequence 2, Application US/10232923

Sequence 2, Application World 162249A1

Publication No. US20040162249A1

GENERAL INFORMATION:

APPLICANT: Hong Kong University Science and Technology

APPLICANT: Liang, Chun

APPLICANT: Liang, Chun

APPLICANT: Pu, Zhiling

APPLICANT: Pu, Zhiling

APPLICANT: Pu, Zhiling

APPLICANT: No. Zhiling

TITLE OF INVENTION: ANTISENSE OLIGONUCLEOTIDE INHIBITION OF HUMAN REPLICATION-INITIAN

FILE REFERENCE: 2014-183-14

CURRENT APPLICANTON NUMBER: US/10/232,923

CURRENT PILING DATE: 2002-08-29

NUMBER OF SEQ ID NOS: 27

SOFTWARE: Patentin version 3.1

SEQ ID NO 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 385, Application US/09864785

Sequence 385, Application US/09864785

Patent No. US2002017568A1

GENERAL INFORMATION:
APPLICANT: StinchComb, Dan
APPLICANT: Draper, Ken
APPLICANT: Draper, Ken
APPLICANT: McSwiggen, Jim
TITLE OF INVENTION: Enzymatic Nucleic Acid Treatment of Diseases or Conditions Relate
TITLE OF INVENTION: Levels of NP-Kappa B
FILE REFERENCE: 400/022 (MBHB00-812-D)
CURRENT APPLICATION NUMBER: US/09/864,785
CURRENT FILING DATE: 2001-05-23
NUMBER OF SEQ ID NOS: 3929
SOFTWARE: PatentIn version 3.0
SEQ ID NO 385
LENGTH: 17
                                                      APPLICANT: Ribozyme Pharmaceuticals, Inc.
